

## CUSTOMER CHALLENGES

Customers often run into short-term capacity challenges on their on-prem storage platforms due to budget constraints, unforeseen project requirements, once-off special projects and/or capacity management

### CHALLENGES INCLUDE

- Temporary capacity for development and test systems.
- Temporary expansion due to unforeseen elastic requirements (e.g., Black Friday).
- Procurement lead times due to global component shortages.
- Inflexible procurement governance.

## THE SOLUTION

-  Our solutions enable your organisation to reap the benefits of consuming Cloud storage without first going through the pains of a Cloud-migration.
-  Either because of business choice, security concerns or lack of opportunity to execute a Cloud migration, an organisation can leverage the benefits of consuming Cloud storage through pivoting to Hybrid Cloud management with Cloud storage bursting.
-  Most Cloud providers offer some native auto-scaling functionality, such as the vertical scaling of database storage.
-  With adaptive scaling provided as a service, users can “set it and forget it”, while they work on other targeted tasks.
-  Our portfolio automates this process while lowering costs with storage efficiencies (deduplication, compression and compaction).

## CLIENT BENEFITS

- ✓ Flexible billing options either time-based via Cloud Provider or term-based via original equipment manufacturer.
- ✓ Temporarily move data from on-prem environments to Cloud or between Clouds.
- ✓ Enables dynamic workload flexibility.
- ✓ Data centre resources are complemented by immediately available, on-demand Cloud storage resources.
- ✓ Available for Google Cloud, Azure and AWS.
- ✓ Migrate Windows applications and users to the Cloud without modification.
- ✓ Reduce overall storage spend.
- ✓ Provide multiple data environments for different customer requirements, from disaster recovery to development.
- ✓ Offer scalable, high-performance shares with snapshots that integrate with Windows.
- ✓ Minimise storage footprint and maximise cost savings.

## CLIENT BENEFITS (continued)

- ✓ Provide peace of mind, with guaranteed service-level agreements for performance, availability and durability.
- ✓ Provide inherently resilient storage, integrated with cost and performance-optimising features.
- ✓ Single endpoint supports automation via application programming interface.
- ✓ Simply optimise and migrate workloads as well as get more out of a Hybrid Cloud environment.
- ✓ A self-managed storage environment, deployed on native Cloud resources, which provides all the benefits of Cloud coupled with a robust, Enterprise-grade data management platform that provides an enhanced Cloud experience.

## WHY CoCre8?

- CoCre8 Technology Solutions enable your organisation to burst into the Cloud quickly and seamlessly without the need for full migration.
- Whether you are looking for a short-term solution to host your data in the Cloud or looking to benefit from features such as high-availability, data protection and storage efficiencies in the Cloud, we have you covered.
- We enable you to leverage Cloud infrastructures in a short period of time with Cloud bursting, even with complex legacy applications.
- Guaranteed performance boost and advanced data management.
